Alaa Qutishat

Senior Flutter Developer | Mobile Engineering | Enterprise Applications & Security

Amman, Jordan • +962798599163 • a.a.qutishat@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 6+ years of engineering experience architecting enterprise-grade mobile solutions across FinTech, Telecom, and Healthcare. Deep technical expertise in Dart concurrency, Clean Architecture, BLoC, and native Android/iOS integration via Platform Channels. Proven track record designing mission-critical eKYC pipelines (biometrics, NFC, FaceTec, Innovatrics), banking-grade security (SSL pinning, secure key management), and offline-first architectures. Extensive experience governing multi-store releases across Google Play, App Store, and Huawei AppGallery while mentoring cross-functional engineering teams.

TECHNICAL SKILLS

Programming Languages: Dart, Kotlin, Java, SQL

Mobile Development: Flutter, Native Android, BLoC, Provider, GetX, Platform Channels,Flavors & Environment Management

Architecture & Design: Clean Architecture, SOLID Principles, Reusable UI Components, Offline-First Architecture, Dependency Injection

Mobile Security & Identity Verification: Certificate Pinning, Biometric Authentication, Secure Token Storage, eKYC, NFC Tag Reading, Google ML Kit, Innovatrics SDK, FaceTec SDK, Obfuscation, R8/ProGuard

API Integration & Networking: RESTful APIs, Dio, WebSockets, API Interceptors, Token Refresh Workflow, Hive, SQLite, Room, Caching Strategies

Firebase & Cloud Services: Firebase Cloud Messaging (FCM), Crashlytics, Analytics, Realtime Database

Testing & Quality: Unit Testing, Widget Testing, Bloc Test,Dart DevTools Profiling, Memory Leak Elimination.

Development & Release Tools: Fastlane, GitHub Actions, Firebase (FCM, Crashlytics, Analytics), Google Play Console, Apple App Store Connect, Huawei AppGallery

PROFESSIONAL EXPERIENCE

Senior Mobile Application Developer | Wewebit **05/2022 – Present**

- Led Flutter development for enterprise mobile applications, establishing Clean Architecture conventions and coordinating production releases across Google Play, Apple App Store, and Huawei AppGallery.
- Designed and implemented eKYC onboarding workflows integrating Innovatrics, FaceTec, Google ML Kit, and NFC identity extraction.
- Implemented certificate pinning, secure token storage, and encryption at rest for sensitive mobile workflows.
- Collaborated with backend, QA, and UI/UX engineers to define API contracts, troubleshoot integrations, and deliver production mobile features.
- Refactored complex Flutter navigation and memory-management logic, improving code maintainability and addressing application responsiveness issues.

Mobile Application Developer | Beyond Solutions **06/2020 -05/2022**

- Developed and maintained cross-platform Flutter applications and native Android components using Dart, Kotlin, and Java.
- Built reusable networking layers with Dio, API interceptors, and token refresh handling, integrating Provider and GetX for application state management.
- Integrated Firebase Cloud Messaging, Realtime Database, Crashlytics, and Analytics for notifications, data synchronization, and monitoring.
- Improved Flutter UI responsiveness through widget rebuild optimization, lazy loading, and more efficient rendering.

EDUCATION

M.Sc. In Artificial Intelligence — Yarmouk University | 2022–2026

Thesis: Brain Tumor Detection and Classification Using a Hybrid YOLO–GhostNet Architecture

B.Sc. In Computer Science and Applications — Hashemite University | 2016–2020

SELECTED PROJECTS

Zain And Success Partners (Telecom Dealer Management & Mobile POS Platform)

- Contributed to the development of an enterprise telecom platform supporting nationwide dealer operations, digital onboarding, SIM lifecycle management, and mobile POS services.
- Developed secure eKYC workflows integrating biometric verification, facial recognition, liveness detection, document OCR, and NFC-based identity extraction.
- Implemented and maintained scalable Flutter modules supporting 20+ business capabilities, including SIM registration, ownership transfer, SIM swap, and subscriber information updates.
- Supported cross-platform production releases across Android, iOS, and Huawei, focusing on application security, reliability, and maintainability.

Orbex (Forex Trading & Financial Services Mobile Application)

- Contributed to the development of a cross-platform mobile application supporting Forex trading account management, digital onboarding, and financial services.
- Developed mobile features supporting user registration, identity verification, trading account management, and secure access to financial information.
- Integrated application workflows for wallet management, deposits, withdrawals, and fund transfers through backend services.

Jobetrol (Jordan Petroleum Refinery Company)

- Architected a unified ecosystem consisting of a consumer mobile application and a dedicated station-side application.
- Implemented a secure digital wallet, dynamic loyalty engine, map-based partner discovery, reward redemption, and SSL certificate pinning.
- Developed a dedicated station application to integrate with Network POS hardware, enabling real-time invoice printing, reward code redemption, and seamless loyalty transaction synchronization.

Edusphere | Learning Management System (LMS)

- Architected a multi-application LMS ecosystem comprising three interconnected Flutter applications for students, teachers, and employees.
- Engineered real-time assessment workflows integrating biometric authentication, Firebase synchronization, and optimized multimedia streaming for interactive examinations.

Wateen | Healthcare Appointment Booking Platform

- Developed a Flutter-based healthcare booking platform enabling doctor discovery, insurance provider filtering, appointment scheduling, and availability management.
- Integrated Firebase Cloud Messaging (FCM) for appointment reminders and status notifications, alongside native device calendar synchronization.

Uncle Osaka | Food Ordering & Order Management Platform

- Developed a Flutter-based ordering platform integrating product catalogs, cart management, and order processing workflows with Hive-based local persistence.
- Integrated backend order management services and optimized API communication, image caching, and asset loading to improve application responsiveness.
