Professional Summary

Senior Mobile Engineer with 5+ years of experience architecting high-performance cross-platform applications using Flutter & Dart. Proven track record of delivering scalable enterprise solutions by leveraging Clean Architecture, and native Android integration. Expert in optimizing app performance, designing fault-tolerant API layers, and mentoring teams to produce maintainable, testable code. Committed to bridging the gap between complex business requirements and exceptional user experiences.

Professional Experience

Wewebit — Mobile Application Developer | May 2022 – Present

- Architected scalable cross-platform ecosystems using Flutter & Clean Architecture, creating maintainable codebases for Multi sectors.
- Engineered high-performance state management solutions, optimizing app startup times and ensuring fluid complex navigation flows across multi-role applications.
- Integrated complex RESTful APIs & Real-time features, handling secure multipart data, biometrics and live communication (Firebase Messaging) to drive engagement.
- Implemented offline-first capabilities & caching strategies using Hive and custom download managers, ensuring seamless user experiences even in low-connectivity environments.
- Led end-to-end deployment cycles for multiple high-traffic apps to Google Play, App Store, and Huawei AppGallery, maintaining 99.9% crash-free sessions through rigorous testing.
- Optimized application performance by diagnosing and fixing memory leaks, and refactored UI components for responsiveness, resulting in smoother frame rates and improved UI consistency.

JAML46 | Beyond Solutions — Mobile Application Developer | June 2020 – May 2022

- Designed and deployed scalable cross-platform mobile solutions using Flutter and maintained legacy native Android (Java/Kotlin) applications, ensuring feature parity and smooth legacy-to-modern migrations.
- Integrated the full Firebase Suite (Cloud Messaging, Analytics, Crashlytics, Realtime Database) to drive user engagement through targeted push notifications and data-driven decision-making.
- Partnered with cross-functional teams (Product, Design, QA) to translate complex business requirements into high-quality technical deliverables.
- Integrated RESTful APIs to fetch and display dynamic data, handling loading states, error messaging, and data caching efficiently
- Developed and maintained core app modules (Authentication, Profiles, Listings) using Dart and GetX/Provider for state management

Education

Bachelor's degree in computer science - Hashemite University, Jordan | 2016 – 2020

Technical Skills

Languages: Dart, Kotlin, Java, Python, SQL

Mobile & Architecture: Flutter (Expert), Native Android SDK, GetX, Provider, Clean Architecture, MVVM, Responsive Design

Core Competencies: State Management, Offline-First Data (Hive/SQLite), RESTful API Integration, Push Notifications (FCM), Biometric Authentication, Google Maps API, Memory Profiling, Performance Optimization, Dynamic Theming
Backend & Cloud: Firebase (Firestore, Auth, Crashlytics, Analytics, Cloud Messaging), MySQL, NoSQL

Tools: Git/GitHub, Postman, Android Studio, VS Code, Figma (Developer Handoff), Jira

Soft Skills

Technical Leadership & Mentoring

Complex Problem Solving

Agile/Scrum Methodologies

Technical Documentation

Cross-Functional Collaboration

Certifications

Big Data Fundamentals, Huawei – 2024

Quality Assurance (QA) Fundamentals – 2021

Data Science and Artificial Intelligence– 2023

Android Development Certification – 2018

Projects

- **Zain And Success Partners** : Built a secure digital KYC solution with fully server-driven dynamic forms, including backend-controlled fields and validation. Implemented advanced biometric verification using Google ML Kit, FaceTec SDK, NFC ID data extraction, and external fingerprint hardware. Optimized app stability with Dio networking, background services, Huawei Push Notifications, and delivered interactive mapping using Google Maps and OpenStreetMap.
- **Jobetrol :** Architected and delivered a unified digital ecosystem for Jordan Petroleum Refinery Company (JoPetrol), comprising a consumer mobile app and a station management desktop system. Implemented a secure digital wallet, dynamic loyalty engine, map-based partner discovery, and seamless reward redemption. Integrated the desktop system with Network POS hardware to automate loyalty synchronization and real-time invoice printing, using clean Flutter architecture and enhanced security with SSL certificate pinning
- **Orbex Mobile Trading App :** A high-performance fintech mobile application built with Flutter, designed to empower traders with a seamless interface for managing accounts, wallets, and market activities. The app streamlines the complex user lifecycle—from secure biometric onboarding and dynamic KYC verification to real-time fund management (deposits, withdrawals, transfers)—delivering a secure and responsive experience for global investors .
- **Edusphere** : Architected a comprehensive LMS ecosystem across three interconnected Flutter applications (Student, Teacher, Employee). Engineered a secure, real-time assessment platform featuring biometric authentication and Firebase synchronization, while optimizing multimedia performance for video courses and interactive exams.
- **Wateen** : a comprehensive healthcare platform using Flutter, implementing Clean Architecture for scalable state management. Engineered key features including location-based doctor discovery via Google Maps, secure appointment scheduling, and real-time notifications with Firebase services, delivering a seamless patient experience.
- **Uncle Osaka App:** Scalable e-commerce platform using Flutter within a Clean Architecture framework. Engineered a dynamic cart and order management system with real-time updates and secure local persistence via Hive, while optimizing network performance and media caching for a seamless user experience.
